LENGTH (non-standard units)

- Non-standard units are everyday objects like blocks, paper clips or body parts
- They are called non-standard because the blocks, paper clips or body parts one person uses may be a different length to those of another person
- This means measurements may not exactly match
- Watch the video and then measure with non-standard units

<https://www.youtube.com/watch?v=1fag0bfQVaQ>

Measure length

What are you measuring?	Non-standard unit	Guess how many units	How many units was it?
	blocks of the same size		
	paper clips of the same size		
	Width of tip of first finger
